

Environment Mission Statement

Tate & Lyle is committed to conducting its business in a manner that is sensitive to the environmental needs of the communities in which it operates.

This is achieved by:

- As a minimum, compliance with all applicable environmental laws and regulations and implementation of responsible standards where laws or regulations do not exist, is a fundamental requirement placed upon operating units. The requirements of local environmental laws and legislation are exceeded where commercially feasible to do so.
- Making continuous efforts to prevent pollution and improve environmental performance throughout all its activities.
- Seeking to minimise the use of energy, materials and natural resources.
- Where possible, developing renewable sources for the energy and materials used by our processes.
- Assessing the environmental risks associated with existing and new activities or when decommissioning facilities, and establishing controls to ensure that the risks remain at an acceptable level.
- Developing renewable products for our customers (for example Bio-ethanol and Bio-PDO) to help them reduce their impact on the natural environment.
- Encouraging concern and respect for the environment, emphasising every employee's responsibility for environmental performance through providing appropriate operating procedures and training.

The procedures for achievement of these commitments are clearly defined and communicated as part of our Management Systems. The more detailed Group Environment Policy can be accessed via the Corporate Website homepage.
